- SEO ranking ✓

The only minor issues found are:

- Eliminate render-blocking resources. Resources are blocking the first paint of your page. Consider delivering critical JS/CSS inline and deferring all non-critical JS/styles
- Largest Contentful Paint takes longer than expected
- Reduce initial server response time. Keep the server response time for the main document short because all other requests depend on it

Roadmap provided by the team, and it states that Jimmy Token is a fun token made for the community. It was produced by Bytedex for social activities and will also be used in their Forum and offical Jimmy Token website.

The Forum works with a referral mechanism, once you become a member you can create your referral code and let your friends join the community forum. The vision of the team is to create a more safe environment for the community instead of the practically anonymous Telegram that enables scammers and shady people.

Team Analysis

Team was found on the ByteDex website.

The team is fully doxxed, there is bio on each of them and the social links redirect to real profiles with much activity. Their CEO also talked in 2021 World Blockchain Summit.

Having a doxxed team is a great sign for a project as it provides confidence and trust that they are trying to make an impact on the Blockchain ecosystem, and not get some quick profit.

JIM is a low risk project, with a healthy community and a very interesting roadmap. The smart contract analysis showed no warnings or errors. The project works on a very interesting referral - rewards mechanism. The project is made by the ByteDex team and they are fully doxxed, Experts on their sector and they contribute to the whole blockchain community. Focusing on Marketing is highly recommended as more holders will be required for the next steps.
